

Claim to be tested...

Difference between the population mean height of Men and Women Olympic athletes is 12.5 cm

### Step 1: Formulate Hypothesis

 $H_0$ :  $\mu_{Men} - \mu_{Women} = 12.5$ 

 $H_A$ :  $\mu_{Men} - \mu_{Women} \neq 12.5$ 

Claim to be tested...

Difference between the population mean height of Men and Women Olympic athletes is 12.5 cm

### Step 1: Formulate Hypothesis

$$H_0$$
:  $\mu_{Men} - \mu_{Women} = 12.5$   
 $H_A$ :  $\mu_{Men} - \mu_{Women} \neq 12.5$ 

### Step 2: Calculate the t-statistic

Claim to be tested...

Difference between the population mean height of Men and Women Olympic athletes is 12.5 cm

#### Step 1: Formulate Hypothesis

$$H_0$$
:  $\mu_{Men} - \mu_{Women} = 12.5$ 
 $H_A$ :  $\mu_{Men} - \mu_{Women} \neq 12.5$ 

Step 2: Calculate the t-statistic

Claim to be tested...

Difference between the population mean height of Men and Women Olympic athletes is 12.5 cm

### Step 1: Formulate Hypothesis

$$H_0$$
:  $\mu_{Men} - \mu_{Women} = 12.5$ 
 $H_A$ :  $\mu_{Men} - \mu_{Women} \neq 12.5$ 

### Step 2: Calculate the t-statistic

Use the "data analysis" add-in within Excel.

- > Equal variance t-test for differences in means.
- > Unequal variance t-test for differences in means.
- > Paired t-test for differences in means

- > Equal variance t-test for differences in means.
- Unequal variance t-test for differences in means.
- Paired t-test for differences in means.
